SUMMARY

L3 and integration engineer, in IT since 2018: fintech (Rocketbank), a ticketing platform (Timepad), SaaS (eyezon), and for the last 3 years media buying (iGaming). I take incidents down to the root cause: logs, API responses, SQL, network, server configuration. I write bug reports, specs and post-mortems for engineering.

I know integrations from three sides: as a SaaS vendor (onboarded the product for clients via SDK and REST API), as a client (15+ traffic sources, trackers, MMPs) and from the payments side (card scheme disputes, holds, authorisation reversals). I build my own services in Python, PHP and JS and run them in production; my main tool is Claude Code.

KEY SKILLS

Support and incidents

L2/L3 · log analysis · RCA and post-mortems · bug reports and specs · SLA · technical documentation · knowledge base

Integrations and APIs

REST API · webhooks · JSON · SDK · S2S postbacks · Keitaro: instances, Admin API · Binom · Voluum · Affise · AppsFlyer: Master and App Management API · Adjust · AppMetrica · FB Pixel and CAPI

Infrastructure and security

Linux · Nginx · PHP-FPM · DNS, SSL · Cloudflare: SSL for SaaS, Workers, WAF · Docker (operations) · Uptime Kuma · Grafana · Graylog · pentest and remediation · ufw, fail2ban

Development and data

Python · PHP and Symfony · JavaScript, Node.js · Bash · SQL: PostgreSQL, SQLite, MongoDB · Claude Code · MCP

Tools

Jira Service Management · Confluence · Zendesk · Usedesk · YouTrack · Chrome DevTools

EXPERIENCE

Integration Lead · media buying, iGaming (NDA)

March 2025 – present

I handle critical integrations, complex investigations, infrastructure and security; mentor for L2/L3 engineers.

- Data investigations: I tell a structural tracker vs MMP discrepancy apart from a broken data transfer; reconstructed the sub_id layout across several Keitaro instances and **15+ affiliate networks** from clicks and postbacks
- Integrations and event debugging between Keitaro, AppsFlyer, Adjust and sources: Facebook, Google, TikTok, Moloco, Mintegral, IronSource, Unity, Bigo
- AppsFlyer at scale: account audit of **4,839 apps** via App Management and Master API, **2,344 dead apps** flagged for removal; I know the quotas and data retention windows
- Fraud cases: when the company was accused of fraud, including bot traffic, found the real causes of the anomalies and proved our position with data
- Infrastructure: **1,000+ domains, 20–100 servers**, DNS, SSL, Cloudflare SSL for SaaS, Linux, Nginx; monitoring with 45 checks, status page with thresholds, alerts
- Security: two authorised penetration tests with remediation, closed **20 findings in 11 phases** on our own infrastructure; for the second target built my own recon tool and reviewed a third-party report, challenging inflated CVSS scores
- Migrated Jira Service Management from Cloud to Data Center: automation rules, queues, request types, SLAs, boards

My own services in production (Python, PHP, JS, PostgreSQL, SQLite):

- Access portal with Telegram login: ~20 services, per-person and per-service permissions, revoking all access in one action
- Task tracking and KPI service for the department: time norms, SLAs, reports; with it the department raised SLA compliance from 54% to about 95%
- App availability check across 59 storefronts: **sped up from 62 to 2.9 seconds**
- PWA landing page and playable ad builder for Facebook, Unity, IronSource and AppLovin: 12 games, XSS sanitiser, optimisation
- Offer registry with 500+ records, event senders for AppsFlyer and Adjust, cloaking control panel via the vendor API
- AI: Claude-based advisor for task review (prompt cut from 11.7k to 3.3k tokens without quality loss); local AI services on a GPU, connected via MCP

Senior Integration Specialist · media buying, iGaming (NDA)
September 2023 – March 2025

- Keitaro: users and permissions, sources, postbacks, Admin API, domains, flows, landing pages, standalone instances; Binom, Voluum
- AppsFlyer end to end: team members, raw data, integrated partners, tokens and allow lists, audit logs, agency accounts
- Company's internal CRM on Symfony: administration and code changes, traffic accounts, offers, reports
- Onboarding and debugging 15+ traffic sources and events down to the conversion; the farm-team stack in daily work: antidetect browsers, proxies, ad accounts; cloaking with Adspect, MagicChecker, Hoax, Palladium
- App testing and delivery: **~1,000 apps a year and ~100 PWAs a month** through the department

Product Integration Specialist · eyezon (SaaS)
February 2022 – July 2023

- Onboarded the product for clients in Russian and English: HTML, CSS, JavaScript, JSON, SDK integration, REST API
- Bug reports and prioritisation, testing in Chrome DevTools, Xcode and Android Studio; drove incidents through to a fix
- Logs and monitoring in Graylog and Grafana, status and statistics checks in MongoDB and PostgreSQL

Technical Support Specialist · Timepad
November 2020 – February 2022

- Non-standard technical requests in Usedesk: page customisation, API setup, web analytics integration
- Reproducing errors and filing bug reports in YouTrack; knowledge base and manuals, **new-hire ramp-up cut from 4 weeks to 2**

Expert Support Specialist · Rocketbank
March 2018 – August 2020

- Third line: disputes through international card schemes, fraud prevention, transaction legitimacy checks, authorisation reversals and early hold release, AML/CFT, currency control
- Virtual cards, Apple Pay and Google Pay, SWIFT, MCC, mass payouts, card2card; settlement reconciliation with counterparties

EDUCATION AND OTHER

Moscow State University of Technology "STANKIN", higher technical education, 2017 · English B2: correspondence, calls, documentation

My own game on Steam, Restoration: Chronicles of Survival (Godot): built and released solo, ~1,000 sales, patches based on player feedback.
