Moscow · remote, hybrid, office · open to relocation English B2

SUMMARY

I run the integration department's projects in media buying (iGaming), from request and estimate to launch and review. I migrated the service desk from Jira Cloud to Data Center on schedule for the Head of IT, launched an access portal from scratch that the whole department uses, and rolled out an SLA and KPI system for 20 people: **SLA compliance rose from 54% to about 95%**.

I'm technical: I write specs myself, accept work from engineering and contractors myself, and see integration risks early. I calculate and justify spend on licences, servers and services. I also lead a team of 9 engineers, so planning people and deadlines is part of my daily work. In IT since 2018.

KEY SKILLS

Projects

planning and estimation · specs and acceptance · risks and dependencies · stakeholders · backlog prioritisation · weekly planning · status reports · pilots · releases with rollback · tooling costs

People

managing contractors · vendors · adjacent departments · distributed team · hiring for workload · team training

Tools

Jira: Cloud and Data Center · Jira Service Management · Confluence · Trello · Asana · Google Sheets

Technical background

Python · PHP · SQL · REST API · Linux · Cloudflare · Keitaro · AppsFlyer · Adjust · Claude Code

EXPERIENCE

Integration Team Lead · media buying, iGaming (NDA)

March 2025 – present · 20-person department; stakeholders: six media buying teams, analysts, partners, advertisers

Projects

- **Service desk migration from Jira Cloud to Data Center**, ~3 months, sponsor: Head of IT, delivered on schedule: automation rules, queues, request types, SLAs, boards, field mapping between systems
- **Access portal from scratch**: a single Telegram login for ~20 services, access requests and one-click revocation of all access. Used by the whole department; releases through a test environment with rollback
- **SLA and KPI system** for a 20-person department: 57 task types with time norms, SLAs, grades and development plans, bonus calculation. SLA 54% → ~95%, resolution time from "within the day" to 1–5 hours; people got a clear growth path
- **Pre-landing and playable ad generator**: launch, testing with media buyers, rework based on their feedback (taught the generator to rework landing pages from the market). Stopped when media buying shrank and the tool was no longer needed
- **Ad launch automation**: specs, tasks for contractors, acceptance of their work
- **AppsFlyer account audit** of 4,839 apps via API: 2,344 dead apps flagged for removal. When the company was accused of bot traffic, worked the case with AppsFlyer: gathered the data and proved our position
- Removed a dependency on another department (an API to the internal CRM) with a workaround: links to portal resources placed directly in the CRM through the offer registry with 500+ records

How I work

- Weekly planning of project tasks with the team: who does what and in what order; daily check-ins with heads of adjacent teams; backlog grooming with the second team lead: set the order, drop what is outdated
- New initiatives follow one path: idea, spec and estimate, management approval, test environment, release with rollback, report. Plans, estimates and project statuses live on the internal portal
- Spend on licences, servers and services: I calculate and justify it, cut what is unnecessary and defend what is needed with numbers
- Load grew from ~25 to ~70 tasks a day: built a workload model in standard minutes, used it to justify hiring 7 people and proposed a department structure to management
- Team of 9 engineers in Moscow, Minsk and Almaty: hiring, onboarding, grades

Senior Integration Specialist · media buying, iGaming (NDA)

September 2023 – March 2025

- Integrations and traffic launch: Keitaro, AppsFlyer, Adjust, 15+ sources, postbacks; 1,000+ domains, 20–100 servers

- ~1,000 apps a year and ~100 PWAs a month through the department: testing and delivery; changes to the internal CRM on Symfony

Product Integration Specialist · eyezon (SaaS)
February 2022 – July 2023

- Rolled out the product for clients in Russian and English: SDK, REST API, setup; drove incidents through to a fix together with engineering

Technical Support Specialist · Timepad
November 2020 – February 2022

- Knowledge base and manuals project: **new-hire ramp-up cut from 4 weeks to 2**; the link between support and engineering

Project work · Support Science, Mirputeshestviy.rf
2020 – 2021

- Mirputeshestviy.rf (Federal Tourism Agency project): split support into tiers, wrote specs for engineering, introduced an XML parser so part of the requests no longer reached developers
- Support Science: external "second opinion" for a fintech launch, review of processes and the customer journey

Rocketbank · fintech
March 2018 – August 2020

- Partner Support Department Manager (March – August 2020): team of 5, new scripts and processes; before that expert support, third line

EDUCATION AND OTHER

Moscow State University of Technology "STANKIN", higher technical education, 2017 · English B2: correspondence, calls, documentation

My own game on Steam, Restoration: Chronicles of Survival: the full cycle solo, from prototype to release and patches based on player feedback, ~1,000 sales.
